climbing skins

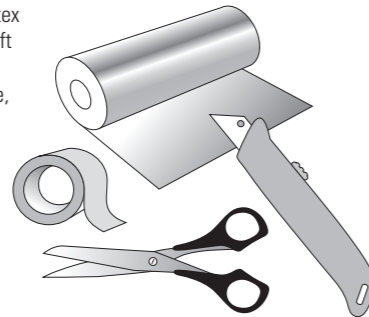

whizzz, the sensational, acrylic-based climbing skin adheres like a "skin without adhesive". Ultra-easy handling and ultrafast attachment and detachment. No loss of adhesion. No protective netting necessary.

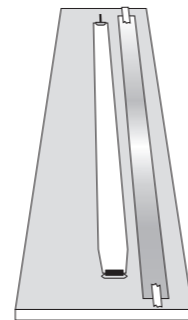

A world first: the whizzz tape for DIY re-coating.

1. You need: the original coltlex whizzz tape, scissors or a craft knife, adhesive tape to fix things and a sufficiently large, even work surface.

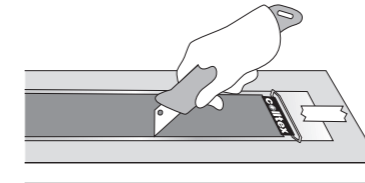

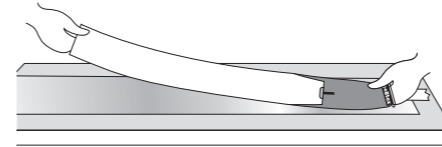

2. Preparation: thoroughly remove dirt, fir needles, grit, etc. from the adhesive side of the climbing skins.

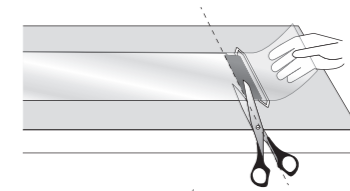

3. Roll off whizzz tape with the foil side down onto a clean, cut-proof work surface to the length of the skin. Fix the ends to the work surface with adhesive tape.

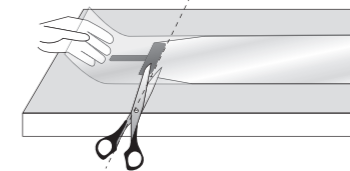

4. Place the climbing skin with the adhesive side downwards as straight as possible on the whizzz tape and press it down.

5. Cut off the foil along the edges of the skin.

6. Turn the skin, so the adhesive side is turned upwards and carefully cut off the foil below the skin clip and the tail fastening. Once again firmly press the foil onto the entire skin.

7. Fold climbing skin and stow away.

Only peel off the plastic foil immediately before using the climbing skin!

The 9 advantages of the whizz skin. Swiss made.

- No sticking together when folded
- No protective netting, no film, no pro-skin necessary
- Unlimited attaching/detaching, no loss of adhesion
- Effortless detaching of skins
- Eco-friendly
- Extremely temperature-resistant
- Sturdy and durable thanks to a special fibre mix
- Ultimate climbing and gliding characteristics
- A world first: do-it-yourself re-coating
